

Hardware Reset Approach (for AVC760A / AVC761A)

1. Turn off the power and dismount the cover from the unit.

2. Find the Reset Point. (near rare board)

3. Take a close look at Reset Point (JP2)

4. Connect the two jumps(pins) to form a short circuit. Then plug in the power and hold the short circuit for about 20 seconds until appears the initiation image and then DVR will be rebooted after 3 seconds.
